

Video Tutorials on covering MATH009/MATH012 content:

<http://polaris.umuc.edu/~rlaurie/math107/YouTubeSitesMath012.html>

MathTV.com has a list of topic and subtopics on their home page so you can find many videos about a particular topic. My favorite teacher is the crusty old Mr. McKeague that likely developed the website and gets to the point with his gravelly voice. Most topics have multiple teachers so you can select a more pleasant but likely boring one if you like. There is some teachers talking in Spanish if that is more helpful for you.

KhanAcademy.org has about 1800+ free videos about many topics including Algebra. He claims to be Bill Gates' favorite teacher.

[Ludcid Education.com](http://LudcidEducation.com) Have connections to Derek Owens video courses. Workbook available for about \$22.

Prealgebra Course has similar content to MATH001

Algebra 1 Course has similar content to MATH009

Algebra 2 Course has similar content to MATH012

DerekOwens.com is his more formal Online Courses taught with videos \$58 per month for distance learners and you need to buy the workbook for \$22. It is a pay-for-view home schooling site for Math classes through Calculus and Science classes.
